Sustainability

We seek good design through products that combine sustainability, shape, function, quality and authenticity. We work diligently to find new ways to reduce our impact.

Buscamos el buen diseño a través de productos que combinen sostenibilidad, forma, función, calidad y autenticidad. Trabajamos diligentemente para encontrar nuevas formas de reducir nuestro impacto.

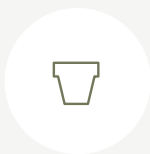

Nous recherchons un bon design à travers des produits qui allient durabilité, forme, fonctionnalité, qualité et authenticité. Nous travaillons avec diligence pour trouver de nouvelles façons de réduire notre impact.

Space optimisation

Long lasting lifespan

Planters that give life

No solvents used

No VOCs emission during painting process

Repairable products

Spare parts available

Space optimisation

We are committed to flat packaging allowing the optimisation of space in any logistics centre and reducing transportation.

Long-lasting products

Enduring designs with enduring appeal, capable of defying any temporary trend.

Planters that give life

Planters introduce nature into any space and contribute to improve the air and contribute to the recovery of pollinating insects.

Optimización del espacio

Apostamos por un flat packaging permitiendo la optimización del espacio en cualquier centro logístico y reduciendo el transporte.

Productos duraderos

Diseños duraderos con un atractivo perdurable, capaces de desafiar cualquier tendencia temporal.

Jardineras que dan vida

Las jardineras introducen la naturaleza en cualquier espacio y contribuyen a mejorar el aire y contribuyen a la recuperación de los insectos polinizadores.

Optimisation de l'espace

Nous nous engageons au flat packaging, permettant ainsi l'optimisation de l'espace dans les centres logistiques et la réduction du transport.

Des produits durables

Pour nous la durabilité commence avec le design. Un design séduisant et capable de défier les tendances temporelles.

Des jardinières qui donnent la vie

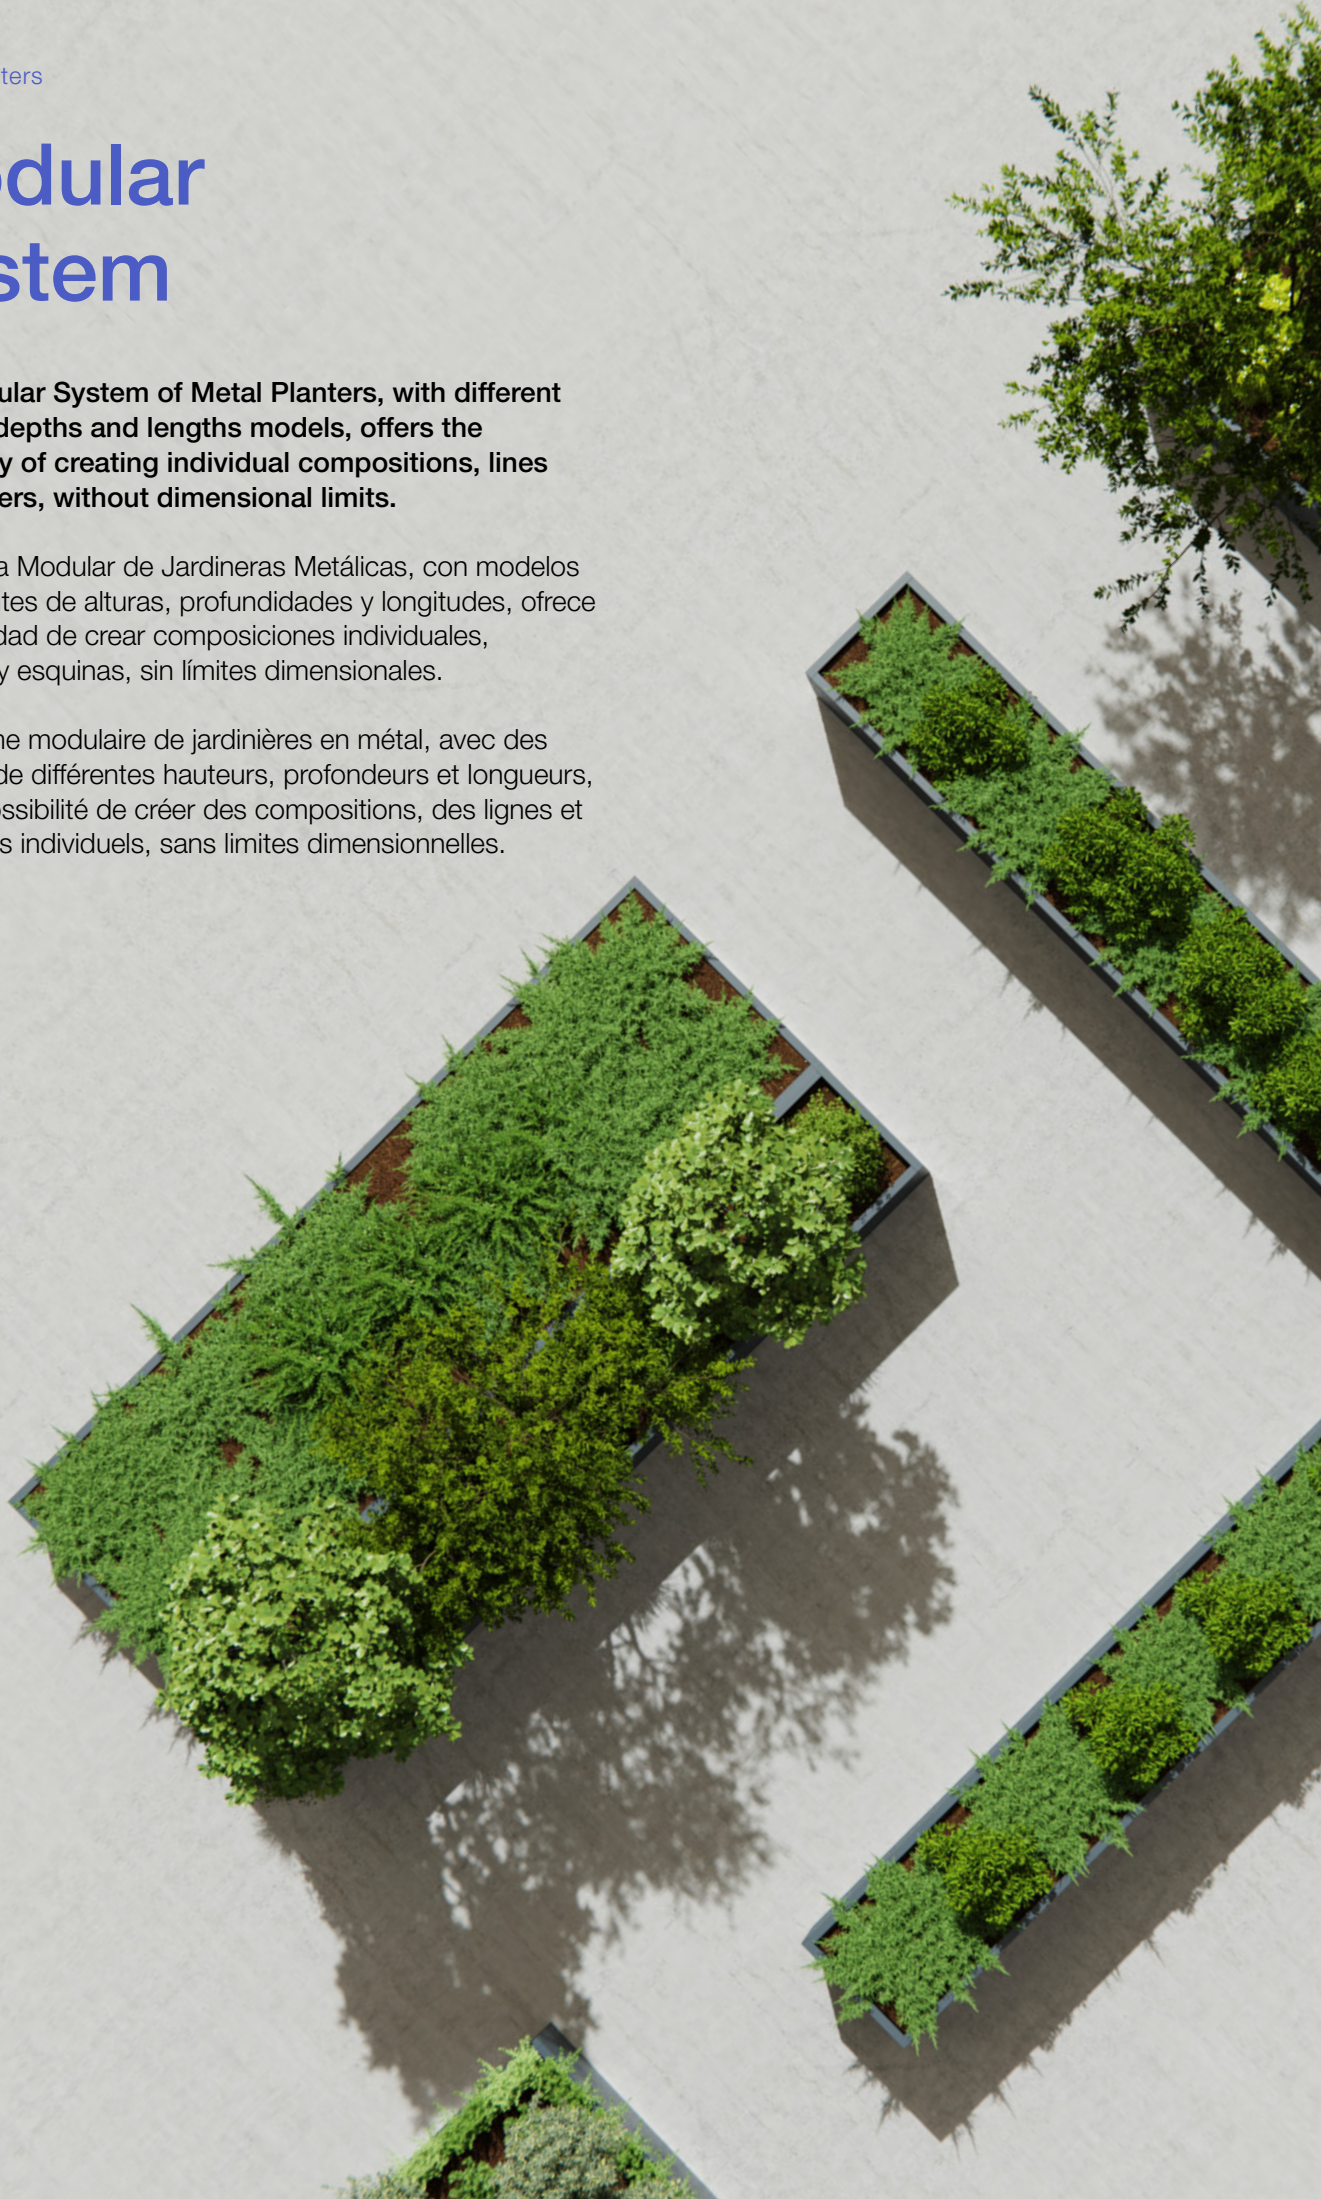

Les jardinières introduisent la nature dans n'importe quel espace et contribuent à améliorer l'air et à contribuer à la récupération des insectes pollinisateurs.

Modular System

The Modular System of Metal Planters, with different heights, depths and lengths models, offers the possibility of creating individual compositions, lines and corners, without dimensional limits.

El Sistema Modular de Jardineras Metálicas, con modelos de diferentes de alturas, profundidades y longitudes, ofrece la posibilidad de crear composiciones individuales, de líneas y esquinas, sin límites dimensionales.

Le système modulaire de jardinières en métal, avec des modèles de différentes hauteurs, profondeurs et longueurs, offre la possibilité de créer des compositions, des lignes et des angles individuels, sans limites dimensionnelles.

New Coating System

Tiger Guarantee

Eng/

The combination of hot-dip galvanized steel with thermosetting powder coating provides very high resistance to corrosion.

Hot-dipped galvanized

The process involves immersing steel in molten zinc, forming a thick, durable, and tightly adhered zinc coating. This coating acts as a physical barrier, shielding the steel from corrosive elements such as moisture, chemicals, and atmospheric conditions.

Tiger Drylac®

The Tiger Drylac powder coating with an architectural quality grade, acts as an extra shield, providing resistance to UV rays, abrasion, and harsh environmental conditions. The combination of galvanizing and powder coating provides superior durability, extended lifespan, and excellent corrosion resistance, making it an optimal choice for challenging environments.

Es/

La combinación del acero galvanizado en caliente con el recubrimiento en polvo termoendurecido proporciona una resistencia muy alta frente a la corrosión.

Galvanizado en caliente

El proceso consiste en sumergir el acero en zinc fundido, formando un revestimiento de zinc grueso, duradero y bien adherido. Este recubrimiento actúa como una barrera física, protegiendo al acero de los elementos corrosivos como la humedad, los productos químicos y las condiciones atmosféricas.

Tiger Drylac®

El recubrimiento en polvo Tiger Drylac con un grado de calidad arquitectónica, actúa como un escudo extra, brindando resistencia a los rayos UV, la abrasión y las duras condiciones ambientales. La combinación del galvanizado y del recubrimiento en polvo brinda una durabilidad superior, una vida útil prolongada y una excelente resistencia a la corrosión, lo que lo convierte en una opción óptima para entornos desafiantes.

Fr/

La combinaison de l'acier galvanisé à chaud et du revêtement en poudre thermodurcissable offre une très haute résistance à la corrosion.

Galvanisé à chaud

Le processus consiste à immerger l'acier dans du zinc fondu, formant un revêtement de zinc épais, durable et bien adhérent. Ce revêtement agit comme une barrière physique, protégeant l'acier des éléments corrosifs tels que l'humidité, les produits chimiques et les conditions atmosphériques.

Tiger Drylac®

Le revêtement en poudre Tiger Drylac de qualité architecturale agit comme un bouclier supplémentaire, offrant une résistance aux rayons UV, à l'abrasion et aux conditions environnementales difficiles. La combinaison de la galvanisation et du revêtement en poudre offre une durabilité supérieure, une longue durée de vie et une excellente résistance à la corrosion, ce qui en fait un choix optimal pour les environnements difficiles.

Corrosion Resistance Grade

The new Herstera coating system has undergone a series of tests in an external laboratory, following the ISO 12944 standards, to verify its corrosion resistance in adverse environments.

El nuevo sistema de recubrimiento de Herstera se ha sometido a una serie de ensayos en un laboratorio externo, siguiendo los estándares de la norma ISO 12944, para comprobar su resistencia a la corrosión en ambientes adversos.

Le nouveau système de revêtement Herstera a fait l'objet d'une série de tests dans un laboratoire externe, conformément aux normes de l'ISO 12944, afin de vérifier sa résistance à la corrosion dans des environnements défavorables.

Corrosion guide according ISO 12944 Standard

Durability ranges*

The durability range is not a warranty period. Durability is a technical consideration or planning parameter that can assist the owner in establishing a maintenance program.

Rangos de durabilidad*

El rango de durabilidad no es un periodo de garantía. La durabilidad es una consideración técnica o parámetro de planificación que puede ayudar al propietario para establecer un programa de mantenimiento

Plages de durabilité*

La plage de durabilité ne constitue pas une période de garantie. La durabilité est une considération technique ou un paramètre de planification qui peut aider le propriétaire à établir un programme d'entretien.

Quick-Mount[®]

Panel Mounting System

Panel-ready Planter System

Herstera Quick-Mount System allows swapping the frontal panels easily with various materials and finishes.

Instant Assembly

The herstera Quick-Mount System allows the panels to be assembled magically.

Easy Panel Maintenance

The panels can be removed from the front with a special tool supplied inside the product box, this allows for proper maintenance of the front material.

Thermo-treated Wood

Greater stability / Thermally treated wood is less prone to warping due to climate changes, making it ideal for exterior cladding.

Improved resistance / Less susceptible to moisture and insects, prolonging its lifespan and reducing the need for treatments.

Selected Wood / Only high quality wood is selected, discarding the black knots in the grain of the wood. This ensures a high aesthetic quality.

Increased durability / Its resistance to weather and decay makes it more durable than standard wood.

Aesthetic enhancement / It features a uniform dark tone, adding visual appeal.

Sustainable / Chemical-free process, environmentally friendly, suitable for sustainable projects.

Mayor estabilidad / La madera tratada térmicamente es menos propensa a deformarse por los cambios climáticos, lo que la hace ideal para revestimientos exteriores.

Mejor resistencia / Menos susceptible a la humedad y los insectos, prolongando su vida útil y reduciendo la necesidad de tratamientos.

Madera seleccionada / Solo se selecciona madera de alta calidad, descartando los nudos negros en la veta de la madera. Esto asegura una alta calidad estética.

Mayor durabilidad / Su resistencia a las inclemencias del tiempo y la descomposición la hace más duradera que la madera estándar.

Mejora estética / Presenta un tono oscuro uniforme, agregando un atractivo visual.

Sostenible / Es un proceso libre de químicos, respetuoso con el medio ambiente, adecuado para proyectos sostenibles.

Stabilité accrue / Le bois traité thermiquement est moins sujet à la déformation due aux changements climatiques, ce qui le rend idéal pour les revêtements extérieurs.

Résistance améliorée / Moins sensible à l'humidité et aux insectes, prolongeant sa durée de vie et réduisant le besoin de traitements.

Bois sélectionné / Seul du bois de haute qualité est sélectionné, en éliminant les nœuds noirs dans le grain du bois. Cela garantit une haute qualité esthétique.

Durabilité accrue / Sa résistance aux intempéries et à la décomposition le rend plus durable que le bois standard.

Amélioration esthétique / Il présente une teinte foncée uniforme, ajoutant un attrait visuel.

Durable / Processus sans produits chimiques, respectueux de l'environnement, adapté aux projets durables.

Plantation Solutions

Two planting possibilities: Self-irrigation for indoor use and geotextile bag + Insulation boards for outdoors.

Self Watering System

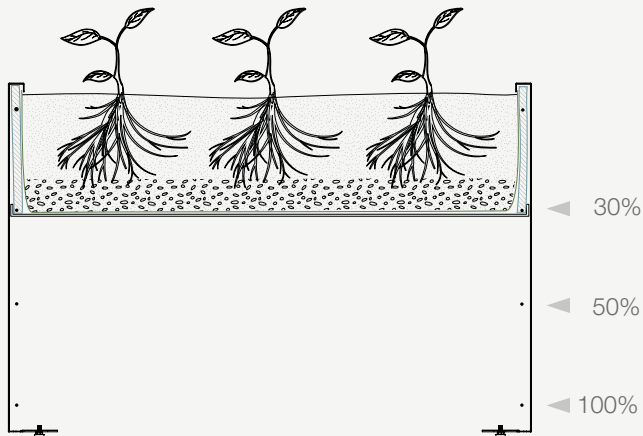

Offers the possibility of using the planters indoor, guaranteeing adequate water irrigation for a long time.

Sistema Autorriego

Ofrece la posibilidad de utilizar las jardineras en interior, garantizando un adecuado riego de agua durante mucho tiempo.

Système d'arrosage automatique

Offre la possibilité d'utiliser les jardinières à l'intérieur, garantissant une irrigation adéquate de l'eau pendant une longue période.

Filtering Bag + Insulation Boards Plantation

Felt bag protects the planter against mechanical damage and filters the substrate particles from the outgoing water. Insulation boards provide a strong thermal break between the steel and the roots, protecting them from extreme temperatures.

Bolsa filtrante + Planchas de aislante térmico

La bolsa de fieltro protege la maceta contra daños mecánicos y filtra las partículas de sustrato del agua saliente. Las planchas aislantes proporcionan una fuerte ruptura térmica entre el acero y las raíces, protegiéndolos de temperaturas extremas.

Bolsa filtrante + Planchas de aislante térmico

Le sac en feutre protège le pot des dommages mécaniques et filtre les particules de substrat de l'eau qui s'échappe. Les plaques isolantes assurent une forte rupture thermique entre l'acier et les racines, les protégeant des températures extrêmes.

Additional Information

They offer the possibility of using the planters indoors, guaranteeing adequate water irrigation for a long time.

Ofrecen la posibilidad de utilizar las jardineras en interior, garantizando un riego de agua adecuado durante mucho tiempo.

Ils offrent la possibilité d'utiliser les jardinières à l'intérieur, garantissant une irrigation adéquate de l'eau pendant une longue période.

Self Watering System for indoor

They offer the possibility of using the planters indoors, guaranteeing adequate water irrigation for a long time.

herstera[®]

Self Watering System for outdoor

Sub-irrigation water reservoirs provide autonomy to planter systems and prevent wasting water.

Additional Information

Main features. With the subirrigation tank, the plant absorbs only the amount of water it needs. The deposit system gives your planter autonomy of 3-4 weeks. Plants develop roots 50% faster.

Overflow System. The overflow system provides the possibility of connecting the excess water drainage pipes directly towards the drain and avoid stains on the terraces.

Sustainable Materials. The sub-irrigation tank is made of recycled polypropylene, a very resistant and safe material.

Expandable System

Thanks to its built-in connectors,
the system can be expanded
in any direction.

Main features

Autonomy for Planter Systems

With the subirrigation tank, the plant absorbs only the amount of water it needs.

The deposit system gives your planter system autonomy of 3-4 weeks.

+50% Stronger Plants

The sub-irrigation method stimulates plant growth. Compared to the surface irrigation, plants develop roots 50% faster.

Water Saving

Water is an increasingly scarce commodity, avoid throwing it away with each watering.

23118001	350 cm	60W	24W	1

Protection: IP65

CABLE EXTENSION

REF.	CABLE	UNI.
23115002	350 cm	1

Additional Information

For ≤ 54W LED setups:

23118001 (Power Supply 60W) + 23115002 (Cable Extension 3,5m*)

For 55W to 180W LED setups:

23118002 (Power Supply 200W) + 23115002 (Cable Extension 3,5m*)

*To keep the cable hidden, it must be passed through the drainage hole before filling the planter with soil. Use 20mm diameter corrugated hose to protect the cable from moisture and mechanical damage.

Three placing options

A

Front lighting

Front lighting. The "LED strip" is hidden under the "Light Support" accessory to diffusely illuminate the front of the planter.

Luz frontal. El "LED strip" se oculta debajo del accesorio "Light Support" para iluminar de manera difusa en el frontal de la jardinera.

Lumière de devant. La "bande LED" est cachée sous l'accessoire "Support Lumière" pour éclairer de manière diffuse la façade de la jardinière.

B

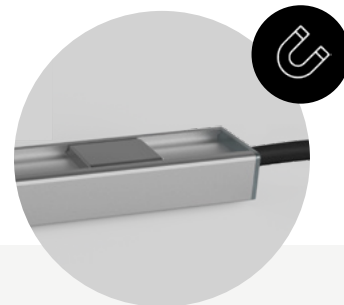

Interior lighting

Inside Lighting. The "LED Strip" is placed inside the planter to illuminate the plant.

Luz interior. El "LED Strip" se coloca en el interior de la jardinera para iluminar la planta.

Éclairage intérieur. La "LED Strip" est placée à l'intérieur de la jardinière pour éclairer la plante.

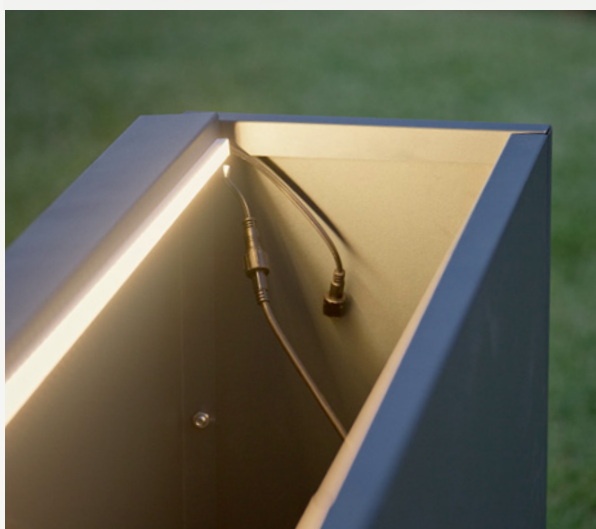

A + B

Front lighting + Interior lighting

There is the possibility of combining your options, and also illuminate the garden and plant.

Existe la posibilidad de combinar las dos opciones, y así iluminar la jardinera y la planta.

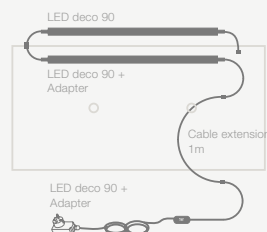

Il y a la possibilité de combiner les deux options, et ainsi illuminer la jardinière et la plante.
